# Sustainable Mobility Index | Montreal

## What is it?

Our report aims at understanding Montreal's sustainable mobility from a global perspective by using quantifiable references. The report highlights the key areas that need improvement to raise Montreal's sustainability performance.

## What is new and distinctive about your project?

This project compares Montreal in a 100 cities index from around the world on three main pillars: People, Planet and Profit. These pillars include a total of 23 indicators which measure the mobility life of a city in depth.

## How it works?

Montreal can compare its indicators with other cities to highlight the functions that need improvement and potentially learn from the strategies followed by better performing cities in the sustainability index.

## Outcomes

Montreal can address and improve its functioning of the transport system for all stakeholders, while facilitating economic opportunity without compromising environmental concerns.
